Capacity of bio insert (l)	0,75
The lenght of the fire line (cm)	35
Fuel container (H x W x D) (cm)	5,2 x 41,1 x 11,1
Glazing	No

Features

For biofireplaces limits do not exist, such devices do not require complicated installation or connection to the chimney, they are **easy to install and to use**. They can be placed both in a spacious house or a smaller flat.

Biofireplaces are also an excellent solution for interior design. The wide range of products enables to use it in the most original ideas.

They are fired with ecological fuel in the form of liquid, which results in **irreal fire**.

NATURAL HEAT

Biofireplace raises the temperature up to several Celsius degrees, depending on the height of the flame and the size of the inside.

100% generated heat is passed on to the room, thanks to which the biofireplace can be an additional source of heating.

MODERN DESIGN

Thanks to the double-sided fire vision, panoramic look and gentle front frame, it perfectly fits into the style of modern interiors.

This type of biofireplace is often chosen in the case of open rooms, where different spaces are mixed e.g. living room with the dining room.

COMFORTABLE USE

Just pour the biofuel to the level marked in the container. It is possible to regulate and extinguish the flame at any time.

Remember to ventilate the room where the biofireplace is located.

GUARANTEE OF QUALITY

Biofireplaces are made of high quality materials. The production process is carried out according to world standards, that is confirmed by obtained ISO 9001:2015 certification.

INSTALLATION POSSIBILITIES

Individual housing: can be mounted in a wall recess or a specially built decorative element protruding from the wall.

FOCUS ON SAFETY

The biofireplace production process is monitored by TÜV Rheinland Poland - biofireplace has the German TÜV safety certificate.

The TÜV-certified container has an additional special chamber that prevents fuel spillage in case of accidental overfilling of the tank. It also has a maximum fuel level indicator.

Absorbent insert placed in the center of the container reduces fuel consumption and protects against spilling of biofuels in case of tilting the device.
